Education

BOSTON COLLEGE

Chestnut Hill, MA

Bachelor of Art in Computer Science

Anticipated graduation: May 2026

Relevant Coursework: Data Structures, Software Engineering, Web Dev, Systems, Logic & Computation

Academic Projects

Peer Assessment Web Application: CTRL-ALT-ELITE

([Github](#))

Software Engineering

Spring 2025

- Developed a **Django-based web platform** for peer evaluation in team-based academic settings.
 - **Key Contributions:** Collaborated with a team to build a **full-stack web application** that allowed students to register, log in, and complete dynamic peer assessments using Likert-scale and open-ended questions. Designed and implemented **admin panel** features to manage evaluations and visualize responses in real time. Ensured **reliable data handling** and user experience through **Django's ORM**, **custom forms**, and **validation tools**.
- Technologies Used: **Python, Django, HTML, CSS, JavaScript, SQLite.**

Community Engagement Website For Clean Air Green Corridor

([Github](#), [Live Site](#))

Web Application Development

Fall 2024

- **Designed and developed a website** to support the **CAGC initiative**, empowering community members in Washington Heights to map hazards (e.g., litter, needles) and **highlight positive neighborhood aspects**.
 - **Key Contributions:** Developed an **interactive mapping tool** to **track and visualize community-reported issues**, integrating **user-friendly features** to enhance **collaboration** among residents and volunteers. Conducted stakeholder interviews to ensure the website aligned with organizational goals.
- Technologies Used: **HTML, CSS, JavaScript.**

Python-Based Word Cloud Analysis of Comedy Vs. Horror Scripts

([Github](#))

Text Processing

Fall 2023

- Developed a **Python-based script analysis tool** to compare **linguistic patterns** in **comedy and horror movie scripts**.
 - **Key Contributions:** Collaborated with a team to analyze comedy and horror scripts using **text-processing techniques**, generating genre-specific word clouds to visualize frequent terms. Leveraged **web scraping and NLP** to extract and process data, **identifying distinct and overlapping language patterns** to provide insights into screenwriting trends.
- Technologies Used: **Python, requests, BeautifulSoup (bs4), NLTK, matplotlib.**

Experience

CARBON FIBER MUSIC

Miami, FL

Web Design Intern

May 2025 - December 2025

Built and maintained responsive pages for the label and its artists using HTML, CSS, and JavaScript. Served as the **main developer** for the [ESCOL Network](#) website, taking the **lead on its design and implementation**. Prototyped designs in Figma and implemented **marketing funnels** using ClickFunnels to support campaigns and content launches. Designed site architecture and user flows that **efficiently guided visitors toward engaging with the brand and converting into clients**, aligning the website's structure with marketing objectives.

FOOT LOCKER INC.

New York, NY

Sales Associate

May 2023 - June 2023

Assisted in in-store sales and managed packaging and shipping for online orders, processing a **minimum of 25 orders per day** while ensuring timely pickups and deliveries. Provided recommendations on floor layout to **optimize customer flow and product visibility**, making it **easier for clients to discover and purchase items**. Analyzed market trends using research and analytics to identify key patterns and suggest strategies for improving sales.

Additional Skills

Languages/Frameworks: **Python:** Django, BeautifulSoup, NLTK, matplotlib; **JavaScript:** React; **Java;** HTML5, CSS; Bootstrap; Swift; **C;** SQLite; **Spanish (Fluent)**
Tools: Figma, ClickFunnels, Excel
